

Android Software Developer

We're a mobile solution provider building first class solutions for the enterprise (large and enterprise accounts) and for the marketing agencies or brands.

As one of our mobile & tablet software developers, your role is to work with UX specialists, designers, product managers and customers to help design and create apps which are beautiful and functional. This is a hands-on role in an innovating market giving you the opportunity to craft excellent mobile and tablet software with the possibility to work in Netherlands/Turkey but also worldwide on site.

Key Responsibilities

- **Programming of software products, features and services**
This role is focussed on programming apps, features and services for Android mobile and tablet devices using both native and cross platform tools based on our internal roadmap. You'll play a key part in taking software from brief to reality, helping with design, estimation of timelines, coding, QA, troubleshooting and code debugging.
- **Working with stakeholders**
You'll work with our in-house team throughout the development process, feeding back realistic time estimates, and helping shape the brief to spot and avoid mistakes before they become an intrinsic part of the project.

Essential skills and experience

- 1-2 years experience working on Android projects, shipped to the Android Marketplace or enterprise roll-out.
- Solid understanding of Object Oriented software design and related methodologies.
- Experience in web development, including knowledge of HTML, CSS and Javascript, and technologies dealing with the cross-over of apps and the web, such as JSON and XML
- A flexible thinker, someone who thrives on solving tricky problems
- Experience working in an agile development environment, with a focus on user-centric design
- A passion for getting the details right. You need to be aware of the qualities that separate the good mobile and tablet apps from the great ones, and know how to make the ones you work on the latter.
- Good communication and relationship skills. This role involves working with a range of people from designers to end users.
- Fluent English

Desirable skills and experience

- Experience working with cross-platform mobile technologies such as HTML 5, jQuery, Frameworks.
- Experience of working with CMS systems/interfaces.
- Educated to degree level, ideally in Computing Science.
